SENIOR DATA ANALYST

360 Dotnet is looking for a Senior Data Analyst to take our client relationship management system, 360 Lifecycle, even further ahead of its competitors.

We are actively developing new products and upgrading our existing applications, using some of the latest web and cloud technologies. We predominantly use Microsoft based technologies and have been an early advocate of Microsoft Azure. We are currently seeking a skilled Data Analyst to join our Business Intelligence team, where you will have the opportunity to help take our data platform to the next level.

ABOUT US

360 Dotnet created the software, 360 Lifecycle, for mortgage and insurance advisers. Whether it is arranging a mortgage or protecting clients against the unknown; we help businesses and clients succeed. We enable businesses to make a positive social impact, helping families to buy their homes and plan their financial future. Our customers choose us for our proven technology solutions, our expertise and our exceptional service.

Our software is trusted by some of the UK's best regarded financial advice brands. We have grown to become a major player in the mortgage intermediary software market; 20% of mortgage brokers rely on our software, our clients include leading names in UK financial advice, such as Alexander Hall and Quilter.

RESPONSIBILITIES & DUTIES

- Collaborate with stakeholders to identify and define data requirements for analysis and reporting
- Creating, designing and developing data models
- Planning and development of all ETL processes and architectures
- Validating results and creating business reports and custom queries
- Monitoring and tuning data loads and queries
- Administer all requirements and design various functional specifications for data
- Develop, maintain and monitor data pipelines to automate the collection and integration of data from diverse sources
- Implement data normalisation techniques to ensure data consistency and integrity across different datasets
- Design and develop reports, dashboards, and visualisations in our BI application to deliver insights to stakeholders
- Evaluate all codes and ensure the quality of all project deliverables
- Work closely with cross-functional teams including business analysts, technical specialists and business stakeholders

SKILLS & EXPERIENCE

- Hands-on experience with data integration tools like Azure Data Factory or SSIS
- Developing reports and custom queries using T-SQL

- Experience with Azure SQL Database
- Experience designing, developing and implementing data warehouse solutions
- Solid understanding of data normalisation techniques and database concepts
- Ability to proactively research solutions and best practices
- Excellent communication and collaboration skills to work effectively with cross-functional teams
- Over 5 years' experience in data analysis, reporting, data warehousing and business intelligence
- Experience with programming languages like Python or R is a plus

DESIRABLE SKILLS

- Previous work experience in the financial services sector
- An understanding of the mortgage, general insurance, and wealth processes.
- An understanding of point of sale / customer relationship management platform would be highly regarded

BENEFITS

- Competitive salary and bonuses
- 25 days holiday plus bank holidays
- Hybrid working between home and our Leicester office
- Hours of work 9-5.30, Monday to Friday
- Healthcare
- Pension scheme
- Access to Perkbox discounts to help employees live and work better
- Be part of an award-winning and expanding business with over 6,000 users of our CRM within the financial advice industry
